Jasco Pharmaceuticals Relocates to New Facility

Woburn, MA, April 17, 2015 – [Jasco Pharmaceuticals, LLC](#) announced today that it has moved its corporate headquarters to 400 TradeCenter, Suite 5900, Woburn, MA 01801.

Jasco was founded in 2009 with a core expertise in high speed medicinal chemistry providing a launching point for a chemical genomics approach to the discovery of selective protein kinase inhibitors. It previously held office and laboratory space at 10-N Roessler Road in Woburn, MA.

The company expects to begin clinical trials with its lead molecule JP-11646, a novel PIM-2 kinase inhibitor being developed for relapsed/refractory multiple myeloma patients, within the next year. “The change in corporate location is consistent with our intention to become a clinical stage company. We are excited about the year ahead and the prospect of transitioning JP-11646 from pre-clinical to clinical status,” said Jasco Pharmaceuticals President, Carmen M. Baldino, Ph.D.

About Pim Kinases

Pim kinases are an exciting class of serine/threonine protein kinases with a structurally unique ATP binding pocket incorporated in all three isoforms (Pim-1, Pim-2 and Pim-3). The Pim kinases are key components of the JAK/STAT signaling pathway and regulate cancer cell survival, providing an important set of therapeutic targets for the treatment of various hematological malignancies and solid tumors. Jasco Pharmaceuticals is developing JP-11646, a novel PIM-2 kinase inhibitor, for relapsed/refractory multiple myeloma patients.

About Jasco Pharmaceuticals

Jasco Pharmaceuticals, LLC is a privately held, pre-clinical stage biopharmaceutical company focused on the development of small molecule oncology therapeutics. The company’s vision is to rapidly and effectively develop clinical oncology candidates for genetically defined patient populations, and then progress these candidates through the clinical development process by means of strategic partnerships.
